Cabinplant optimizes IT security and network performance

Four point solutions replaced by one Cato SASE platform — stable, secure and fast, from Denmark to Australia.

01 Summary

Cabinplant, a global leader in food processing and packaging solutions, faced a series of challenges with its existing IT infrastructure. The environment consisted of separate point solutions for firewall, remote access, MPLS and two-factor authentication — all from different vendors.

This led to a lack of visibility into global internet traffic, poor remote-access performance (especially from Australia), unstable and fluctuating bandwidth between MPLS locations, and a fragmented two-factor authentication setup.

KEY TAKEAWAY

Replacing four fragmented point solutions with one Cato SASE platform lifted Cabinplant's security, stability and performance markedly — and freed the team from patching and updates.

Working with Momentum, Cabinplant implemented the SASE solution from Cato Networks — solving these problems and delivering a stable, high-performance connection between the Danish headquarters and the factory in Poland, globally stable remote access, an integrated firewall and fully integrated two-factor authentication.

Cabinplant now focuses purely on monitoring and continuously tuning its SASE solution, with support from Momentum whenever it is needed.

02 Cabinplant in general

Cabinplant A/S is a global leader in food processing and packaging solutions. From its headquarters in Denmark and its factory in Poland, the company serves customers and users around the world — as far away as Australia.

Its production and engineering operations depend on reliable, secure connectivity between headquarters, manufacturing and a globally distributed workforce.

KEY TAKEAWAY

A global manufacturer with users on the other side of the world needs one network that performs everywhere — not a patchwork of point solutions.

DK-PL STABLE HQ-TO-FACTORY LINK	Global REMOTE ACCESS FOR ALL USERS

03 The challenges

Four vendors, four point solutions, no overview

Cabinplant's IT infrastructure consisted of separate point solutions for firewall, remote access, MPLS and two-factor authentication, all from different vendors. That led to four clear pain points.

- 1 A lack of visibility into global internet traffic.
- 2 Poor performance on the remote-access solutions — especially for users connecting from Australia.
- 3 Instability and fluctuating bandwidth between the MPLS locations.
- 4 A fragmented solution for two-factor authentication.

THE SITUATION

Every point solution meant its own vendor, its own updates and its own patching — time spent maintaining tools instead of protecting the business.

KEY TAKEAWAY

A patchwork of vendor-specific point solutions costs visibility, performance and maintenance time — consolidation was overdue.

04 The solution

One SASE platform from Cato Networks

Together with Momentum, Cabinplant implemented the SASE — secure access service edge — solution from Cato Networks, which not only solved the existing pain points but delivered a set of improvements on top:

- 1** A stable, high-performance connection between the headquarters in Denmark and the factory in Poland.
- 2** A globally stable remote-access solution for all users.
- 3** An integrated firewall with visibility into both encrypted and unencrypted traffic, ensuring protection against cyber threats.
- 4** A fully integrated two-factor authentication solution, integrated with Microsoft.

No more patching point solutions

Since implementing the Cato Networks solution, Cabinplant no longer worries about updates and patching of separate point solutions. The team focuses exclusively on monitoring and continuously tuning the SASE solution, with support from Momentum whenever needed.

KEY TAKEAWAY

Firewall, remote access, WAN and two-factor authentication consolidated into one Cato SASE platform — managed as one, supported by Momentum.

05 So, what's the result?

Through the collaboration with Momentum, Cabinplant has achieved a significant improvement in its IT operations: security, stability and performance have all been lifted markedly.

Global internet traffic is now visible end to end, remote users — including those in Australia — work on a stable connection, and the bandwidth fluctuations of the old MPLS setup are gone. Two-factor authentication is no longer a separate island but fully integrated with the Microsoft environment.

Momentum's quick response times and targeted advice have given Cabinplant a strong foundation for future growth — with an IT team that spends its time on the business, not on patching point solutions.

**Security, stability and performance lifted markedly
— and a strong foundation for future growth.**

THE RESULT IN ONE SENTENCE

CONTACT US

Ready to take the next step?

Momentum is a leading managed services provider that empowers international organizations to communicate and operate securely, reliably and flexibly in today's digital landscape. As the European arm of Momentum, a global provider of advanced connectivity, communication and security solutions, Momentum EMEA combines deep regional expertise with 24/7 service for over 250 global clients.

We deliver smart, integrated solutions for connectivity, communication, network security and related professional services. Clients benefit from one point of contact, one contract, one SLA and one invoice — regardless of the underlying providers.

Operating fully carrier-neutral, we partner with over 1,400 providers and 2,200 data centers in more than 190 countries and 8,500 cities worldwide. With our own Network Operating Center, a unique Global Voice Platform and an advanced Global Control Portal, clients have full visibility and control over their digital infrastructure.
