**THREADSCAN**

Is your network really secure?

Cyber threats are increasing every day. Hackers continuously search for vulnerabilities in internet-facing systems. Do you know where your risks are? ThreadScan gives you instant insight and continuous protection.

What is ThreadScan?

ThreadScan is an automated vulnerability scanning service that monitors your public IP addresses and internet-facing systems for security weaknesses. It can scan individual IP addresses as well as entire subnets, giving you full visibility across your external network environment.

It works by performing daily automated scans against a database of more than 150,000 known vulnerabilities, continuously updated with the latest threat intelligence. You receive clear monthly reports with practical remediation advice, and if critical risks are detected, you are notified immediately so you can take action without delay.

KEY BENEFITS

Fully automated, periodic scans

For websites, corporate networks, or other systems directly connected to the internet

Checks against more than 150K known vulnerabilities, including the OWASP Top 10

Daily updates of our scanning engines

Online portal for clear and centralized management

Every internet connection is a potential risk

Any system connected to the internet such as your website, email, CMS, cameras, or payment terminals can become an entry point for cybercriminals. Attackers actively exploit vulnerabilities, which can lead to downtime, data theft, and serious reputational damage for your organization and your customers.

FEATURES

Automated vulnerability scanning

ThreadScan performs advanced, fully automated vulnerability scans on a periodic basis: quarterly, monthly, or weekly, depending on what best fits your organization. All identified vulnerabilities are clearly presented in an online portal, including practical remediation guidance, enabling your IT team to quickly resolve and mitigate the risks.

Fully automated vulnerability testing

ThreadScan scans websites and internet-facing systems for structural vulnerabilities using the latest threat intelligence. The database is continuously updated, with around 1,000 new vulnerabilities added each month to ensure protection against emerging threats.

Advanced online Portal

The user-friendly online portal provides clear insight into detected vulnerabilities, including practical remediation guidance. Detailed reports also help demonstrate proactive security management and support GDPR compliance.

Smart collaboration

Momentum EMEA has trained security specialists who can help you interpret scan results and advise on the right remediation steps. This ensures vulnerabilities are addressed effectively and efficiently within your organization.

Curious about the insights you'll get?

Download the example report now and discover exactly what ThreadScan reveals about your external security posture. See which systems are exposed, which vulnerabilities are exploitable, and whether outdated software, weak SSL/TLS configurations, or missing security patches are putting your organization at risk.
